PortalProof

Verifiable proof for commissioned work

A shared record of the request, agreement, delivery, and payment evidence on Portaldot V3.

nato-san · Portaldot Hacker House 2026

PROBLEM

A completed job can still be hard to prove

Business evidence is split across tools that do not share one timeline.

Four places.

No shared record.

When a dispute occurs, both parties collect screenshots and reconstruct what happened.

1. **Agreement**
   Chat or email
2. **Delivery**
   Cloud storage
3. **Payment**
   Wallet explorer
4. **Identity**
   Another account

The missing layer is an ordered, portable proof of work.

SOLUTION

One workspace for the contractor and the client

Wallet authentication establishes each party. The first request remains off-chain and gas-free.

1

Contractor signs in

A wallet signature authenticates the workspace.

2

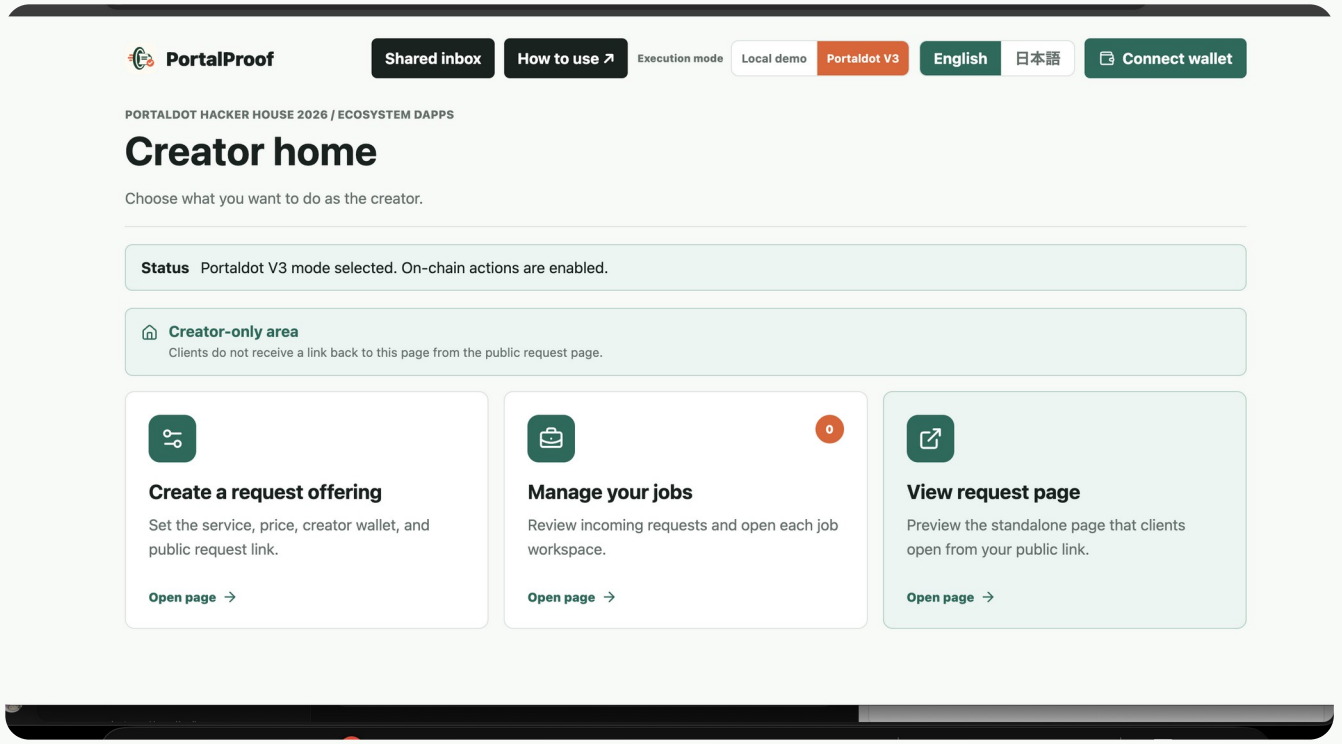

Publishes a work page

The public link can be shared anywhere.

3

Client submits a request

No transaction or gas fee is required.

The same request remains visible across phones, browsers, and separate wallets.

WORKFLOW

Negotiation remains flexible until both parties agree

Cancellation rules change after price and deadline become accepted terms.

1

Requested

The request is preserved

2

Negotiating

Contractor may decline with a reason

3

Terms agreed

Both parties accept price and deadline

4

Delivered

The shared history remains available

Before agreement

The contractor can close an unsuitable request and provide a reason.

After agreement

Cancellation requires approval from the other party. Archiving never deletes the shared record.

ARCHITECTURE

Off-chain usability with ordered on-chain evidence

The blockchain stores proof events. PortalProof does not hold client funds.

Browsers and wallets

Wallet signature login
Contractor and client views
Mobile and desktop

Shared application data

Offerings and requests
Negotiation state
Archives and access rules

Portaldot V3 testnet

Order proof
Delivery hash
Payment evidence record

SOLIDITY · EVM

TRUST MODEL

Each proof must match the job and the expected actor

The design focuses on attribution, ordering, and duplicate prevention.

1	**Actor**	Only the contractor or client can perform the relevant action.
2	**Order**	Delivery and payment evidence cannot appear before agreement.
3	**Uniqueness**	The same transaction cannot become proof for another job.
4	**Transparency**	The public certificate links the job to explorer evidence.

Scope: PortalProof records and verifies evidence. It does not provide escrow or protect the delivery file itself.

PRODUCT PROOF

A QR-linked certificate makes the job independently checkable

A verifier can open the public record without a PortalProof account.

Scan to verify

Completed work proof

Order	Agreed terms recorded	VERIFIED
Delivery	Delivery URL represented by a hash	VERIFIED
Payment	Transaction evidence linked to the job	VERIFIED
Certificate	Public QR page and explorer references	VERIFIED

Example proof transaction 0xea5f29c9…e5707fa

BUSINESS

The same proof layer serves independent and commercial work

PortalProof is not limited to illustrators or individual creators.

Initial users

1. **Independent professionals and contractors**
2. **Studios, agencies, and small service businesses**
3. **Enterprise teams managing external vendors**

Revenue model under validation

Free	One public offering and basic proof
Pro	Multiple offerings, branding, and work history
Team and API	Shared workspaces and verification integrations

Commercial value: less dispute reconstruction, clearer vendor accountability, and reusable proof of completed work.

NEXT

Portaldot support can turn the working product into infrastructure

The current product demonstrates the evidence flow on the V3 testnet.

Now

Wallet authentication
Shared cross-device workflow
Ordered proof events
Public QR certificate

Next 90 days

Independent verification service
Custom work-page branding
Team accounts and API
Production security review

Ecosystem value

More real business activity
Reusable proof primitives
A path from testnet jobs to long-term users
